Overview

General logic

Contacts and participants

The app is centered around a contact manager. It is actually a very overpowered phonebook. The database contains contacts, and stores a very specific set of data useful to orchestras (basic personal data, instruments played and corresponding levels, projects played, some comments,...). Next to that, the database contains projects, which correspond to productions by the orchestra. One project is linked to a bunch of events, which can be rehearsals or concerts. In order for a contact to participate in a project, they have to register through a registration form specific to the project, where they have to indicate their presence and absence to all rehearsals and concerts (in order to make an attendance tabel), and their personal data. This is then used to compare to the database, and find a match (or not). When the user then goes to accept (or not) the registration, they have to link it to an existing contact or create a new one. This ensures that all participants are always in the database. A participant is a separate type of data linking a contact to a project. A contact can of course participate in multiple projects, and for every project, the app needs to store attendance and other data specific to that project, so it would not be practical to reference contacts directly in a project.

Information management

One of the main strengths of this app is the information management, which is a big part of managing an orchestra project. The app offers two ways of spreading informations about a project to its participants:

- **Mailing:** The app supports mailing, to one, multiple or all participants of a project, and even does it automatically sometimes, like at registration. The app automates the mailing, and offers easy options to send templates with personnalized fields (name, project,...). This feature is not intended to distribute all the informations of a project, but merely as a notification system. The participants get a confirmation notification when their registration is confirmed, containing the link to the callsheet (see below), and then

they may get a few emails to notify them of changes to the project info, or urgent requests.

- **Callsheets:** These are static pages, always accessible, containing all project infos. They are created by default with a project with already all the basic infos the app has about the project (calendar, pieces, project managers,...) and are then completed by the user with all the other informations specific to that project (addresses, names of soloists/conductors,...). This page is mailed to every participant at registration, and a notification can be mailed to every participant when it is updated.

Pieces, composers, materials

Next to that, the database also contains some trivia. When the user creates a project, they have to indicate the program, and the pieces need to be in the database. For every piece, the database contains some basic data (date composed, opus number,...) and a link to a composer (for which the database also stores some trivia: nationality, birth and death, ...), the projects it has been played in and possibly one or more materials, which are sets of pdfs containing the scores. When creating a project, the user will be asked to select an existing material for every piece or upload a new one, so that the scores can be downloaded by the participants from the callsheet. A piece can have several materials, since depending on the conductor and concertmaster, the annotations in it might be different.

Other features

We listed the core features of the app, but it has multiple other management features built in to facilitate project management (more details will be given on the next page, since this is only an overview):

- **Auditions management:** If a musician fills the registration and needs to be auditioned, the app has a built-in auditions manager, allowing the user to send an audition request to the candidate, containing an audition package (pdfs with the excerpts, and text instructions with the precise instructions) and a link to a personal portal where they can upload their audition. They can keep coming back to it, uploading new excerpts (no need to upload everything at once), and once they are done, they can confirm, closing the portal for them. Once they are done, the audition videos appear on the user side, and need to be reviewed. The user can then approve or deny the registration of the candidate.
- **Accounting:** Every project has a dedicated accounting page, allowing the user to add incomes and expenses, upload files for every transaction, divide them into categories,...

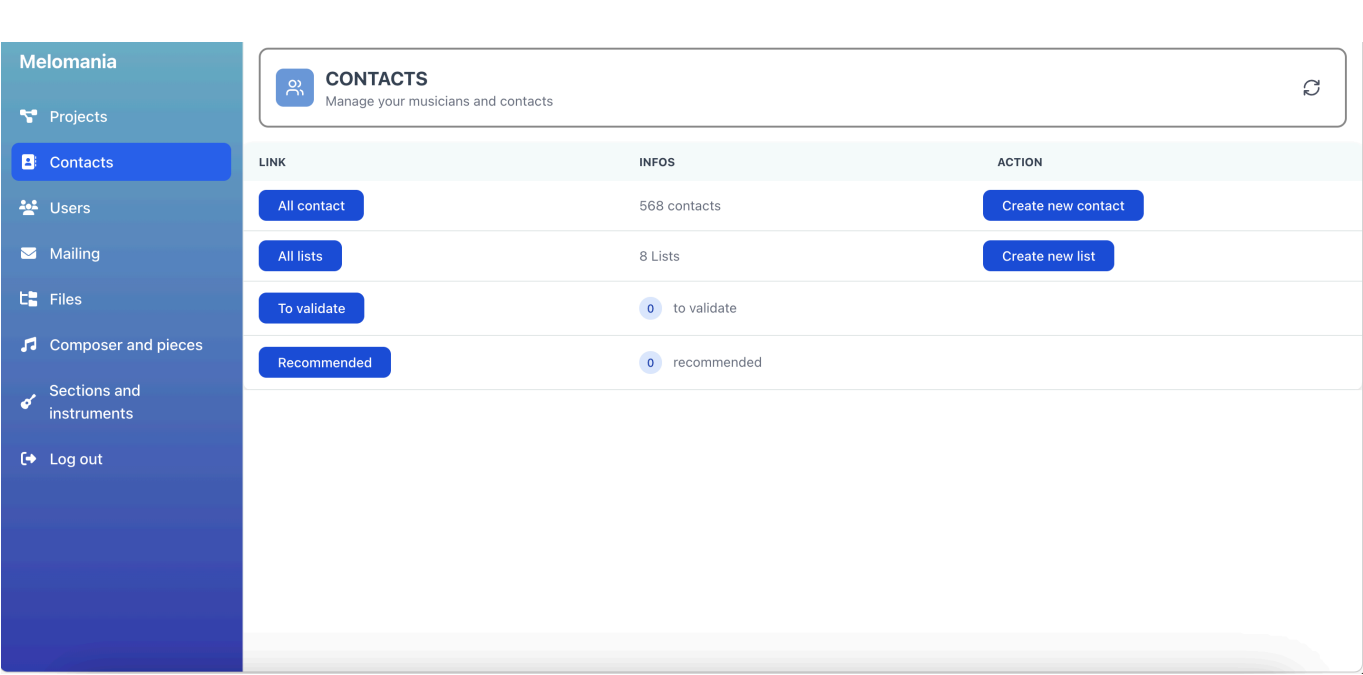

The page then displays a dashboard with a few key data points, making a distinction between future and past transactions, allowing to see not only the total balance of the project, but also the current balance. Since a lot of the transactions are payments to musicians, the app records them as a separate category, and shows those payments in the participants list of the project, as well as on the contacts page of the relevant people. If some contacts participate and are paid in multiple project, the app shows what the orchestra currently owes them.

- **Recruitment:** A big part of organizing a project is finding the people for the orchestra. Since most of the time, this is done by several people, to avoid contacting the same people multiple times and to help keep track of who needs to be followed up on and so on, the app has a dedicated page to make a list of the people that were contacted. It stores the name, some way of contacting them and their instrument, as well as the person who contacted them and their status (not contacted yet, awaiting response, confirmed,...). This page has some intelligent features to facilitate the process, such as marking automatically everyone that has been on "awaiting response" for more than a fixed delay as "follow up", automatically changing the status to "confirmed" when people register to the project (or adding them to the list as confirmed if they are not in it yet), advanced filtering to only show some instruments, categories, etc.
- **File management:** The app has a drive, where it can organize files, and associate folders to a project in order to make them available on its callsheet. This is a way to share pictures, posters or recordings with the orchestra without having to use external services, for instance. but files can also be stored separately from projects, removing the need for expensive subscriptions to the cloud.

In the next section, a detailed presentation of every page and feature will be given.

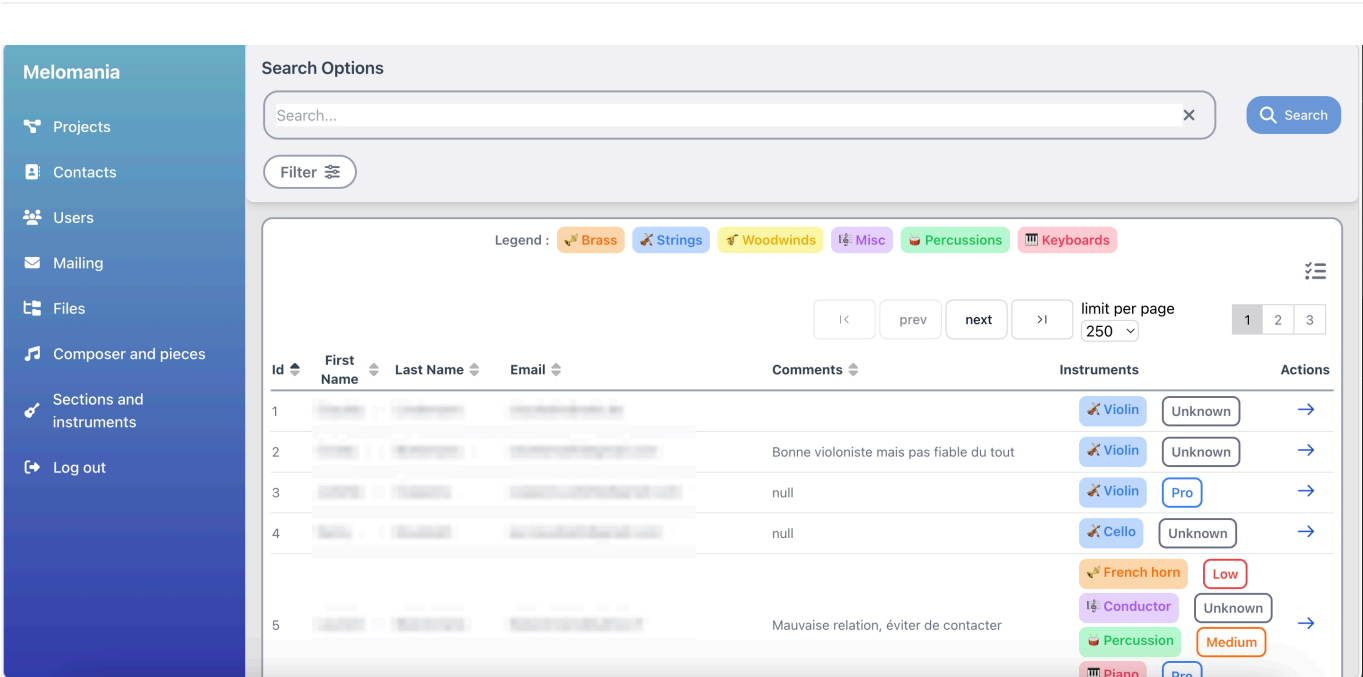

Contacts pages

Main contacts page

This page just serves as a gateway to all the features involving contacts management.

Contacts search

This page features the main contacts database search engine. As shown on the screenshot, it shows contacts with their instrument(s) and corresponding levels (one can be excellent in an instrument and a beginner in another), some contacts info and a comment. The search engine can filter contacts by instrument, instrument family, level, project played, or any other field, or any combination of those fields to allow complex searches.

PROJECT	NAME	BILL DATE	BANK DATE	AMOUNT	CATEGORY	ATTACHMENTS	ACTION
No accounting entries found							

This page displays all the data stored about a person. At the top, it show the contact data (mail, phone, Messenger handle), comments, instruments and levels and date of creation and last update. Below that, it shows all the projects the contact has participated in, and the section they played in. At the bottom of the page, it shows if the person has received (or is still owed for an ongoing or recent project) a payment. This is linked to the accounting page of the pertinent project. The contact can be edited or deleted by clicking on the button in the top right corner.

Save Add

This page is pretty self-explanatory and allow to create a contact by filling out all the basic fields. To retroactively indicate that the contact has played in a project, it needs to be manually added to the participants list of said project through the project management page.

Contacts lists

Contacts lists are used to write an email to a custom group of people. The app can send an email to all participants of a project without needing to create a list, but if the user needs to send an email to a subgroup of the project (all strings, for instance), or outside the scope of one specific project, they need to make a list. There are three pages for lists: a main page with all the lists, a list creation page and a list details page.

Files page

Edited by Naomi

What is the Files page?

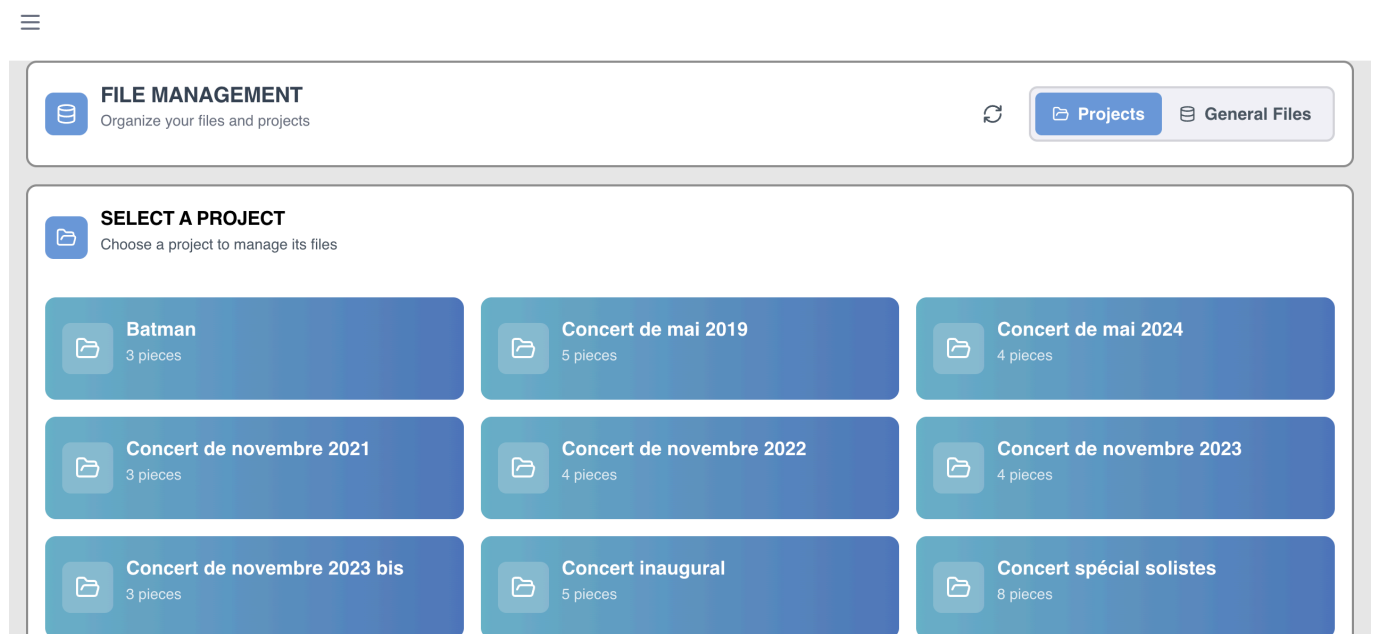

The Files page is Melomania's built-in file storage system. Think of it like a Google Drive integrated directly into the app. It lets you store and organize files without needing an external service like Dropbox or Google Drive. Files can be linked to a specific project or stored independently for general use.

The Files Page

When you click on **Files** in the left sidebar, you see two tabs at the top right:

- **Projects** — files organized by project
- **General Files** — files stored independently from any project

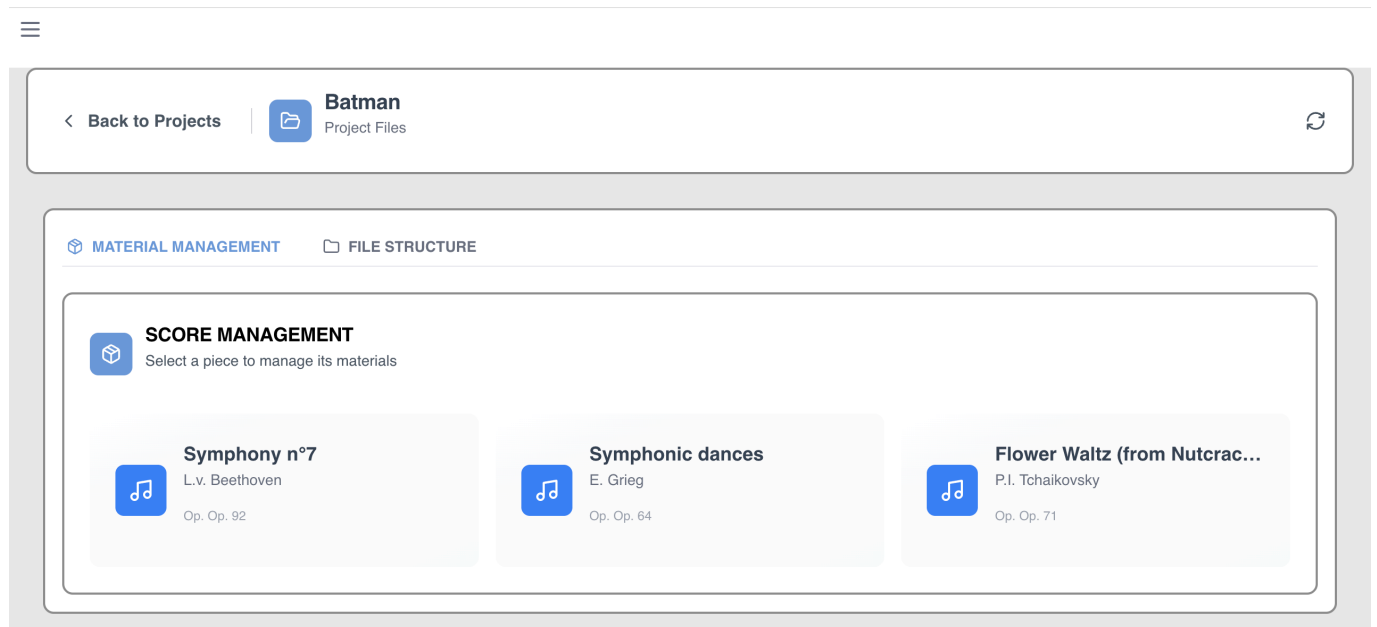

Projects tab

This shows all projects as clickable cards. Each card displays the project name and the number of pieces it contains. Click on a project to open its file manager.

Inside a project's files you have two tabs:

Material Management

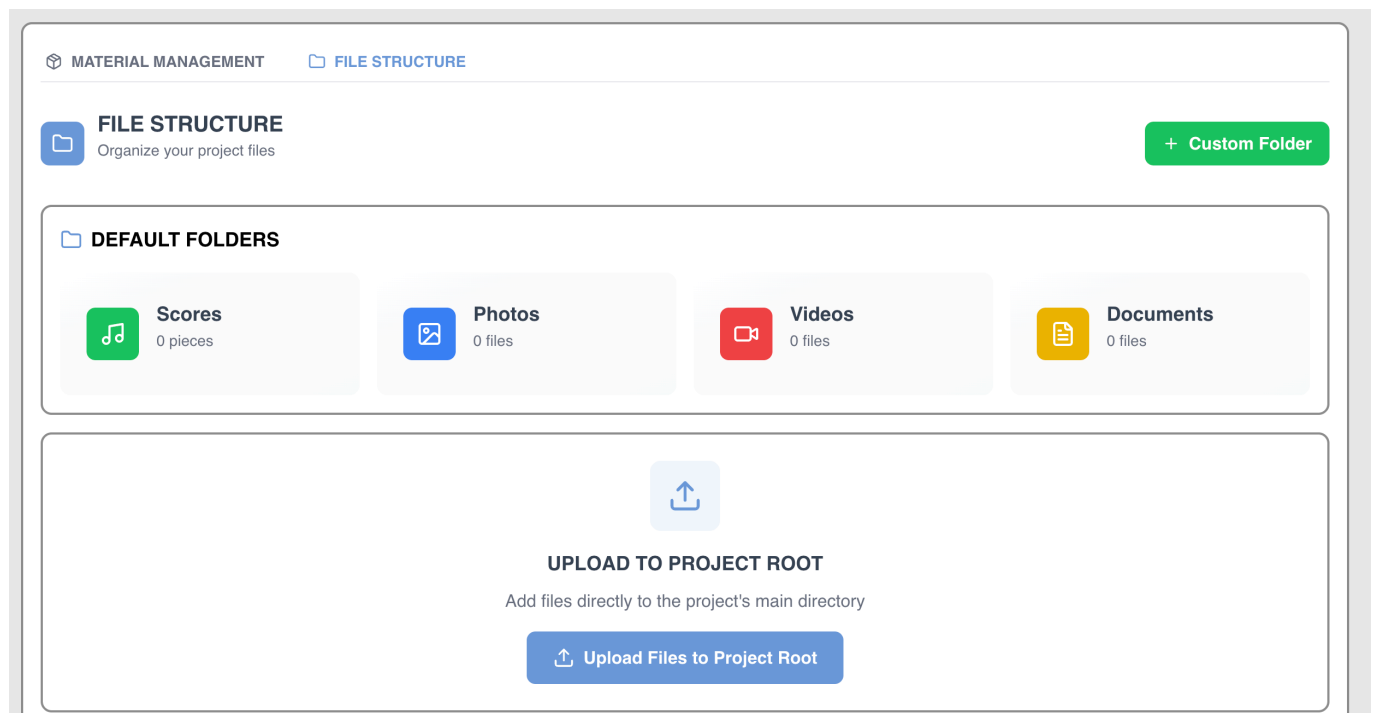

This is where you manage the **score files** (PDFs of sheet music) for each musical piece in the project. Each piece is shown as a card — click on it to upload, replace, or delete its score materials. These are the files musicians download from the callsheet to prepare for rehearsals and concerts.

A piece can have **multiple materials** — for example different annotated versions for different conductors or concertmasters.

⚠ If a piece is missing its material, the app will warn you with a yellow banner on the Project Details page.

File Structure

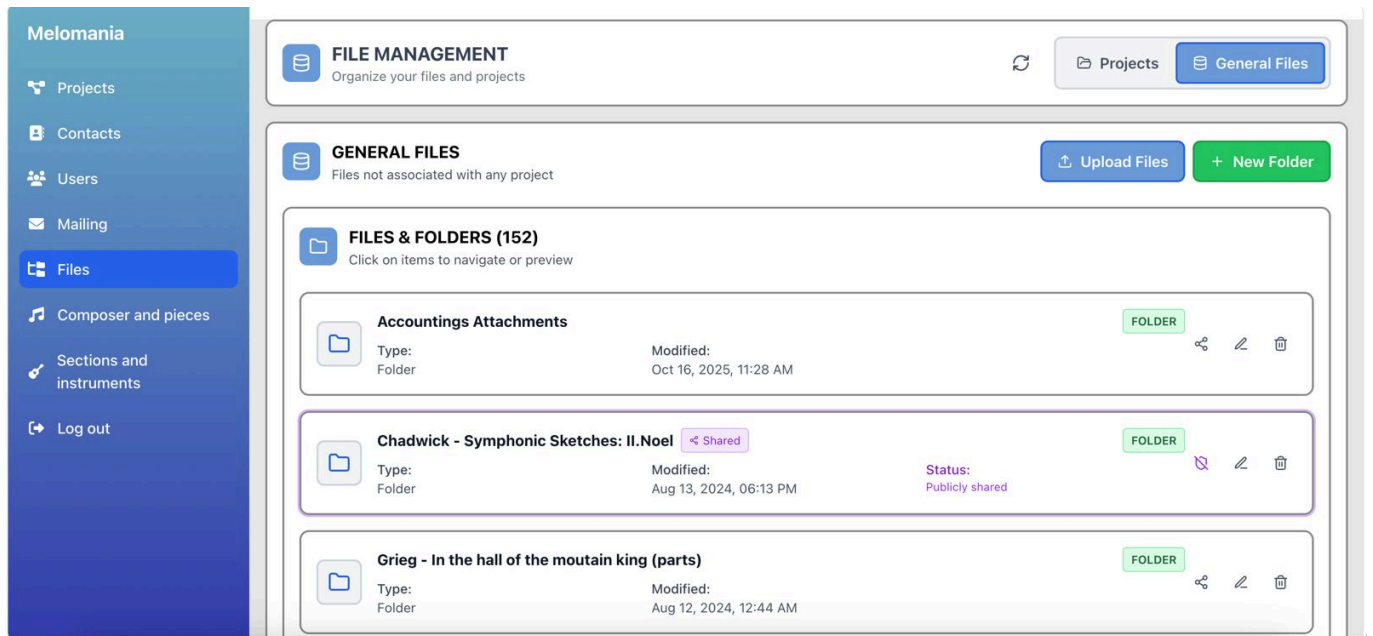

This is a folder-based file explorer where you can organize any other files related to the project — posters, photos, recordings, administrative documents, etc.

From the File Structure you can:

- **Create folders** to organize your files
- **Upload files** into any folder (single or multiple files at once)
- **Preview files** directly in the browser — images, PDFs, audio, and video files can all be previewed without downloading
- **Download files**
- **Share a folder** — makes the folder accessible on the project's callsheet so participants can view and download files directly
- **Revoke sharing** — removes a folder from the callsheet
- **Rename** files or folders
- **Delete** files or folders

Right-clicking or using the : **action menu** on any file or folder gives you all available options.

General Files tab

This tab stores files that are not linked to any specific project. It works the same way as the File Structure tab — you can create folders, upload files, navigate into subfolders, preview and download files, and manage everything the same way.

This is useful for:

- Administrative documents used across multiple projects
- Templates (poster templates, email templates, etc.)
- Any files you want to keep in the system without attaching them to a specific production

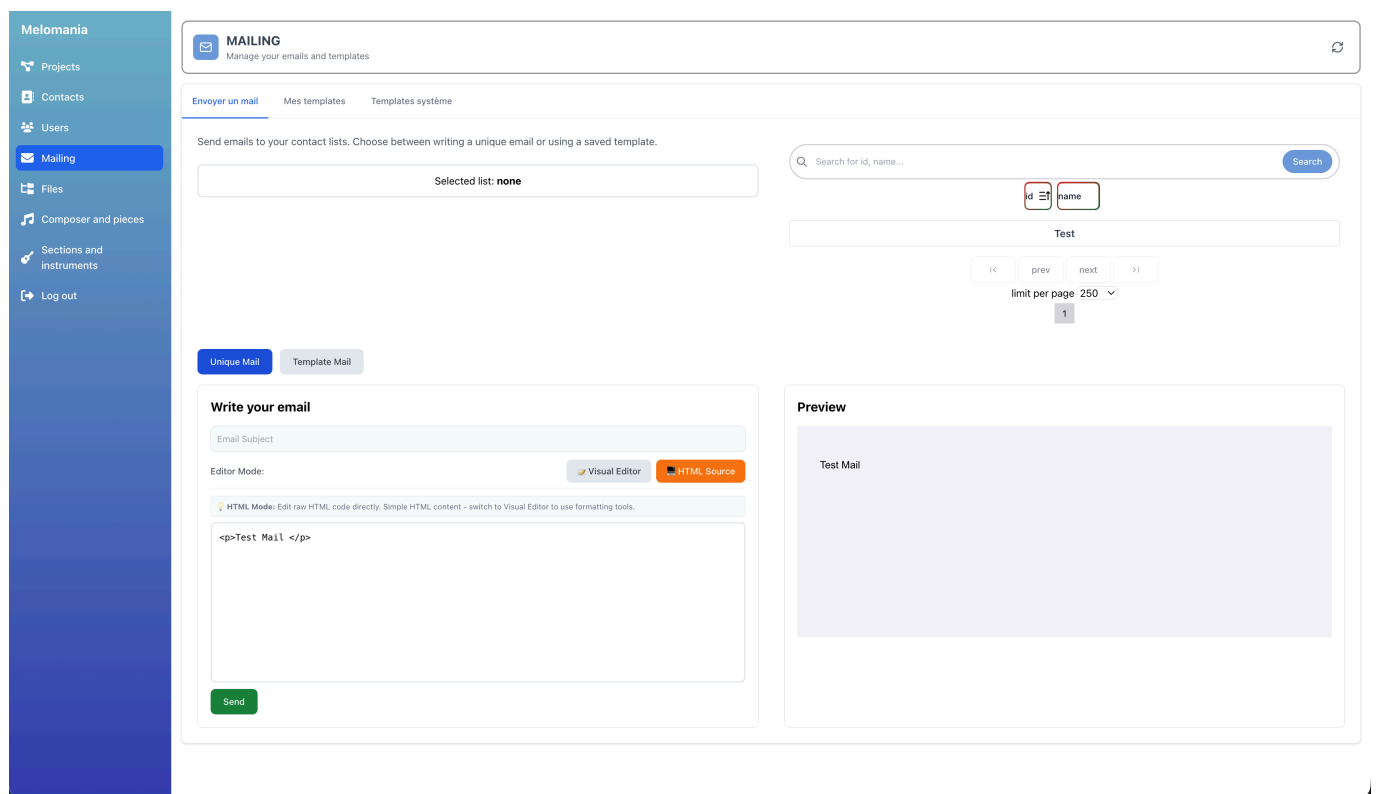

Tips

- Always upload score files (materials) for each piece in a project — the app warns you on the dashboard if any are missing
- Use **Share folder** in the File Structure tab to make project folders visible on the callsheet for participants — this avoids sending files by email
- Files can be **previewed directly** in the browser without downloading, which is useful for quickly checking a score or poster
- The **General Files** tab is a good place for documents you reuse across multiple projects

Global mailing manager

Edited by Borshon The global mailing page is the app-wide email hub, separate from the project-level mailing tools. It is divided into three tabs: sending an email to a contact list, managing custom templates, and configuring system templates.

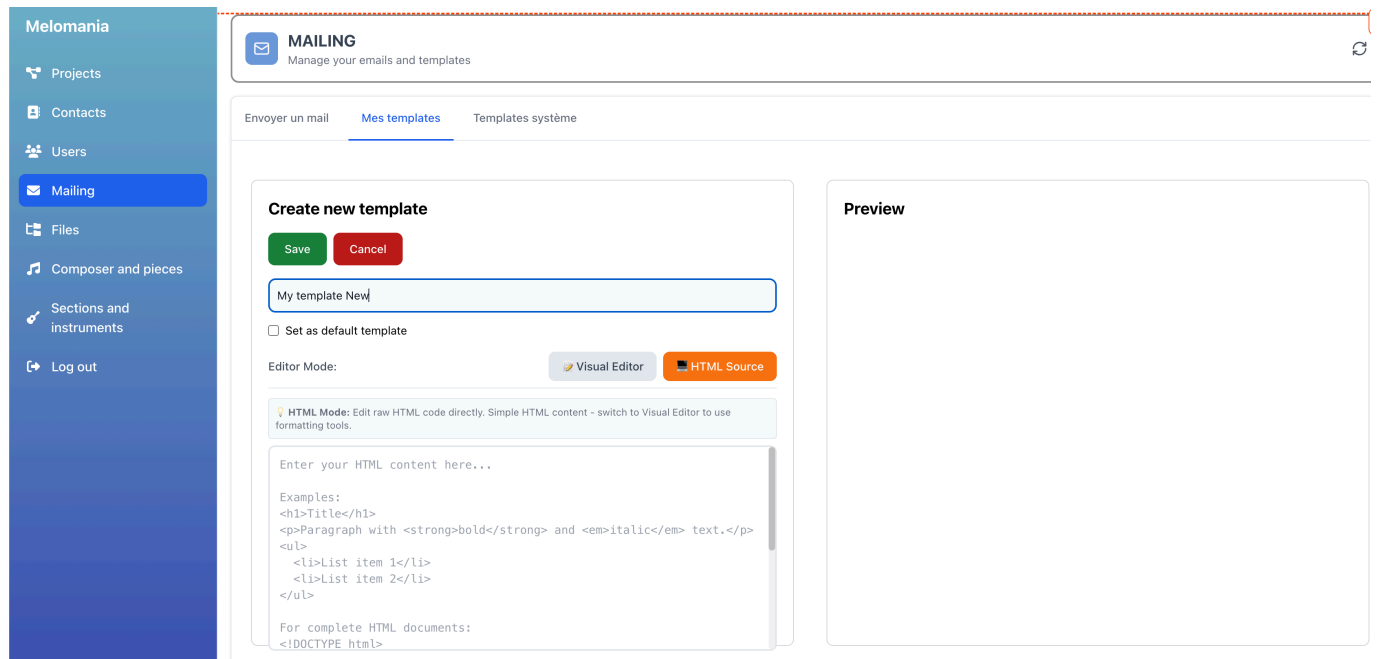

Sending an email

This tab is used to send emails outside the scope of a single project, targeting a custom contact list. On the right side of the screen, the user picks the contact list they want to reach. Once a list is selected, they can either write the email from scratch directly in the editor, or pick an existing template to use as a base.

When a template is selected, the app may ask for some extra information depending on what the template needs, for example a project name or specific contact details, so it can fill in the right values. Before anything is sent, a full preview of the final email is shown so the user can check everything looks correct.

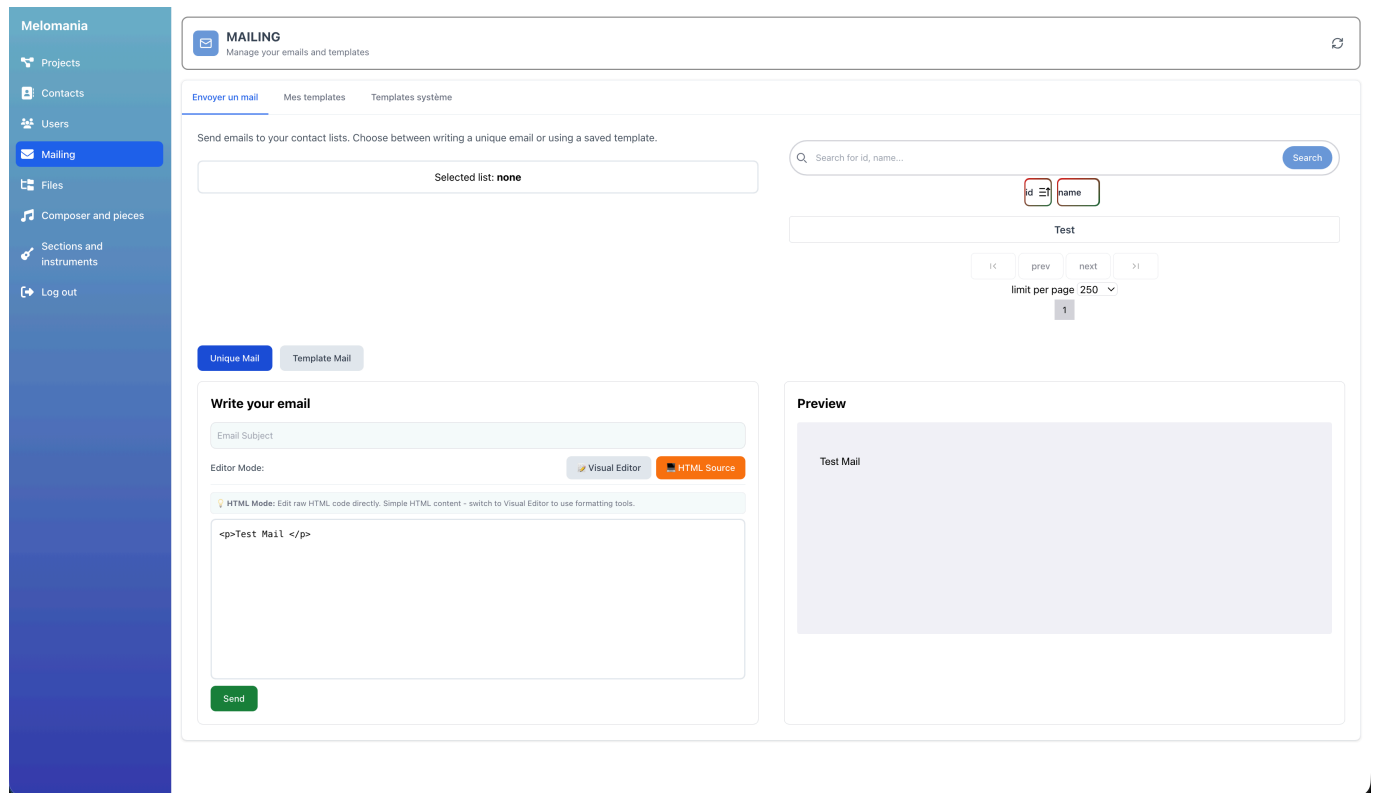

Custom templates

This tab is where the user manages their own reusable email templates. Templates can be created, edited or deleted from here. The built-in visual editor lets the user format text, insert images, add links and structure the content without writing HTML by hand, though switching to HTML mode is also possible for more control.

Once a template is saved, it shows up in the list when the user goes to send an email, and they can select it from there. The user can also mark one template as the default, which will be pre-selected automatically when opening the send tab.

System templates

System templates are the automated emails the app sends out on its own during certain actions. This covers things like callsheet update notifications, recruitment emails sent to contacts, audition request emails and registration confirmation messages. These templates cannot be deleted since the app depends on them to work, but their content can be edited freely.

One important thing to keep in mind when editing system templates: they contain variables like `${NAME}`, `${PROJECT}`, `${CALLSHEET}`, or `${REGISTRATION}` that the app replaces with the real values at the moment the email is sent. These variables need to stay in the template exactly as they are. Removing or changing them will cause the app to send out emails with missing or broken information.

This page is the accounting tool of the app, allowing the user to record all transactions pertinent to the project and keep statistics about them. The top frame shows the current, future and total balances as well as the list of all transactions and the button to add a new one. There are three different balances because a distinction is made between transactions

that are planned and ones that are actually done. This allows to reflect not only the total, long-term balance of the project, but also its current state, and what is still pending.

To create a transaction, this form needs to be filled. Every transaction has a name, a bill date (theoretical date) and a bank date (actual payment date), an amount (negative for expenses, positive for incomes), and a category (see below). The user can also attach files, like invoices. A payment can also be marked as a payment to a musician (checkbox on top) to be linked to a contact. In that case, their payment will be displayed in the participants view of the project, and will also be visible in the contact detailed view.

The next frame lists all files linked to transactions. At the bottom of the page, the left frame shows statistics about the repartition of expenses and incomes among the categories, and the right frame shows said categories. The app comes with default categories (the ones shown on the screenshots), but more can be added if needed.

Attendance page

Edited by Naomi

What is the Attendances tab?

The Attendances tab gives you a complete overview of which participants are present or absent for each event in the project. It is based on the attendance information that participants filled in when they registered. It is split into two tables: one for **Concerts** and one for **Rehearsals**.

When you click on the **Attendances** tab inside a project, you see the **Attendance Report** page.

At the top right there is a red **"Download PDF"** button that generates and downloads a PDF version of the full report.

How the table works

This page generates an attendance table based on the registration forms filled in by participants. Participants are arranged by section, and sections are displayed in orchestral order.

The table has:

- **Rows** — each participant, grouped by section. The section name appears as a bold grey header row before each group. If a participant is a **section leader**, their name is marked with a blue **(Leader)** badge.
- **Columns** — each event (concert or rehearsal) appears as a column, showing the venue and the date/time

For each participant and each event:

- **Green cell with ✓** — the participant is present for that event
- **Red cell with ✗** — the participant is absent for that event

- A **comment column** next to each event shows any comment the participant left about their attendance

The table automatically optimizes the space to accommodate possible comments.

Concerts table

Shows attendance for all concert events, with each concert displayed as a column header showing the venue and date.

Rehearsals table

Shows attendance for all rehearsal events, with each rehearsal displayed as a column header showing the venue and date range.

Downloading the PDF

Click the red "**Download PDF**" button at the top right to generate a PDF version of the full attendance report. The PDF is generated directly in the browser — no server needed. If the generation fails, the app will show an error message.

Tips

- This page is **read-only** — attendance is set by participants when they register, not by the admin
- Use the **Download PDF** button to get a printable version for rehearsals or concerts
- On mobile, the tables scroll horizontally so you can see all events
- If a participant's name appears in multiple sections, it means they registered for multiple sections in the project

Audition management pages

The auditions tool allows the user to request an online audition from a candidate.

Audition manager

Audition package manager

Requesting an audition

When the user wants to request an audition, they have to configure the audition package, and then go to the applications page, and click "request audition". The following window appears:

 **Request an audition**

You are about to request an audition from **Aurian email 3** (section: **Viola**).

 **Automatic PDFs**

 The candidate will automatically receive all PDFs configured for their section. They can download them from their audition portal.

Custom instructions for the candidate

Normal  **B** *I* U   **A**   

Please record the attached excerpts and upload them according to the instructions in this email. Don't hesitate to contact us if you have questions. Good luck!

Describe specific instructions, requested style, technical details, etc.

Specific required materials/files (optional)

e.g., Recording of piece X, 2-minute improvisation, etc.

Remove

Describe specific instructions, requested style, technical details, etc.

Specific required materials/files (optional)

Callsheet pages

Edited by Naomi

What is a Callsheet?

A callsheet is a page shared with all participants of a project. Think of it as the single source of truth for everything a musician needs to know — the program, the events, the scores to download, and the contact information of the project managers. Each participant receives a personal link to the callsheet when their registration is confirmed, and can access it at any time.

New callsheet

New callsheet from the last one

This is the callsheet version management page. When a callsheet needs to be updated, the user can choose whether to create a new version from scratch or from the previous one. The app keeps track of which musicians have opened the latest version of the callsheet (visible on the project dashboard). This allows you to make sure information is correctly reaching all musicians, and take action if someone hasn't seen the latest update.

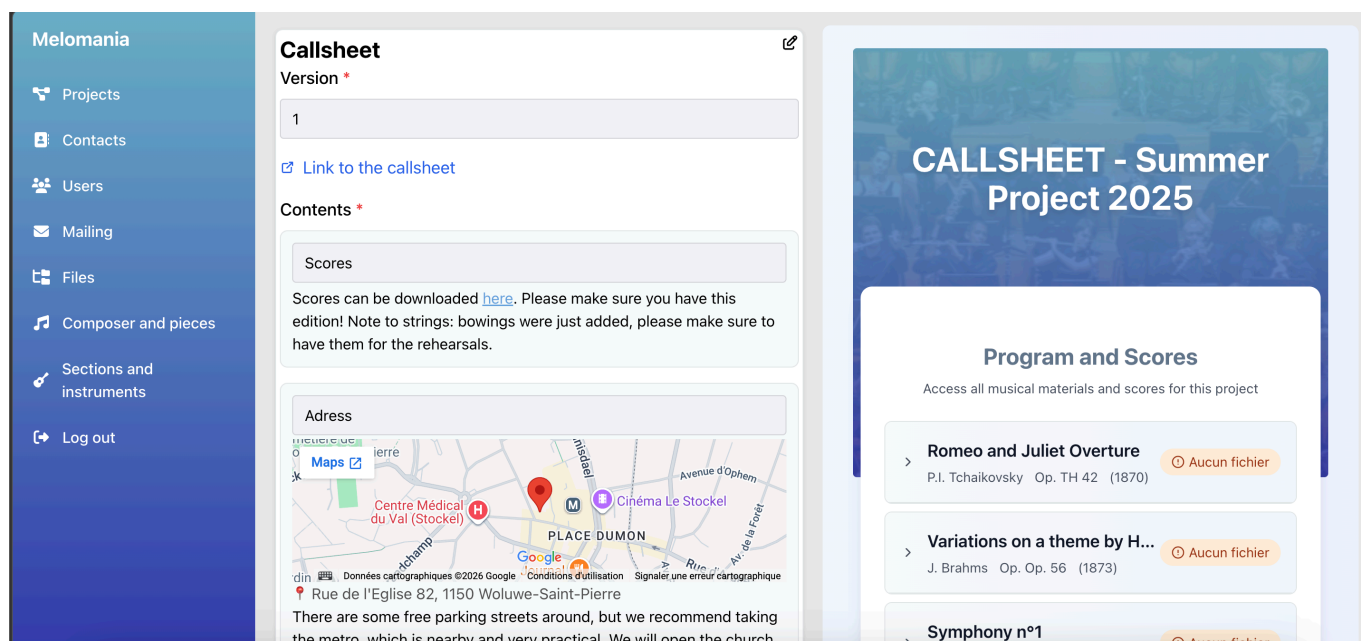

This page shows all existing callsheet versions with:

- **Version number**
- **Last updated date**
- An **arrow (→)** to open and edit that version

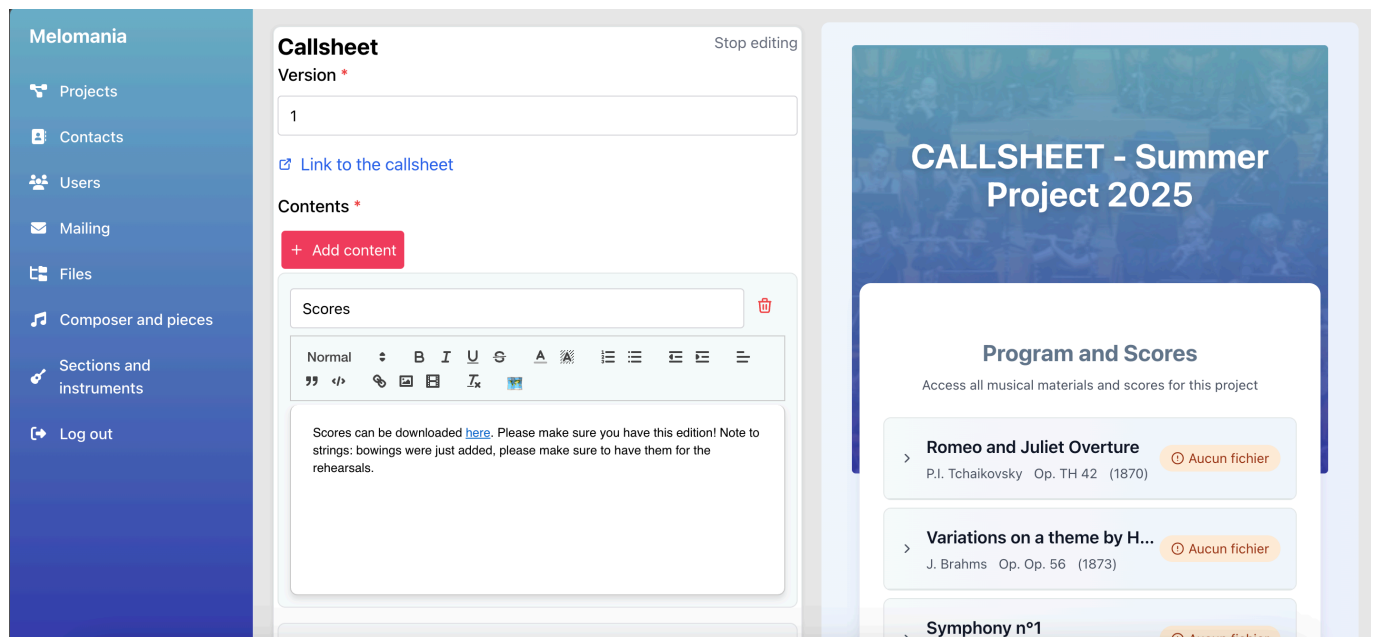

At the bottom you have two buttons:

- **"New callsheet"** — creates a brand new blank callsheet
- **"New callsheet from the last one"** — duplicates the most recently updated version so you don't lose previous content

Callsheet Editing Page

The screenshot displays the 'Callsheet' editing interface on the Melomania website. On the left is a blue sidebar with navigation links: Projects, Contacts, Users, Mailing, Files, Composer and pieces, Sections and instruments, and Log out. The main content area is titled 'Callsheet' and includes a 'Version' dropdown set to '1' with an edit icon. Below this is a 'Link to the callsheet' button. The 'Contents' section features a 'Scores' box with a note about downloading scores and a warning about string bowings. At the bottom of the main area is a map of the location, showing 'PLACE DUMON' and 'Rue de l'Eglise 82, 1150 Woluwe-Saint-Pierre'. To the right of the main content is a preview of the 'CALLSHEET - Summer Project 2025' program, listing 'Romeo and Juliet Overture' by P.I. Tchaikovsky, 'Variations on a theme by H...' by J. Brahms, and 'Symphony n°1'.

When you open or create a callsheet, the screen is split into two parts:

Left side — the editor where you build the content

Right side — the live preview where you see exactly what participants will see, updating in real time as you type

The Editor

The editor has two required fields:

Version — a label for this version of the callsheet (e.g. 1, v2.1). This field is required — the app will block you from saving if it is empty.

Contents — this is where you add all the information. Click **" + Add content "** to add a new section. Each section has:

- A **title** — the heading of that section (required — every section must have a title or the app will block saving)
- A **rich text editor** — where you write the content. The toolbar lets you format with bold, italic, underline, strikethrough, colors, bullet points, numbered lists, alignment, links, images, videos, and more. You can also embed a **Google Maps location** by typing an address — it will show an interactive map on the callsheet.

You can add as many sections as you need, and delete any section using the 🗑️ trash icon.

Note: In the current version, content blocks cannot be reordered after creation.
Plan your sections in advance before adding them.

At the top of the editor there is a **link to the callsheet** itself — this is the link you can share with participants.

CONCERT

Scores

Scores can be downloaded [here](#). Please make sure you have this edition! Note to strings: bowings were just added, please make sure to have them for the rehearsals.

Address

There are some free parking streets around, but we recommend taking the metro, which is nearby and very practical. We will open the church at 1:15pm on the day of the concert.

Conductor

We communicate through two canals: the address noreply@melomania.be (please save this address to avoid getting the emails in the spam), and Whatsapp. We have two whatsapp communities: one for everyone (please click [here](#) to join) and one specifically for those who need accommodations (join [here](#)). Please join those communities, for they will be the main canal during the rehearsals.

Dress code: the dress code for the concert is all black. Or T-rex costume, your choice.

Contact Information

Below are the project managers. Please don't hesitate to call or email one of us for questions or remarks.

Indira Toppo Email: indira.toppo@melomania.be Phone: 02 737 11 11 Messenger: indira.toppo	Indira Toppo Email: indira.toppo@melomania.be Phone: 02 737 11 11 Messenger: indira.toppo

This is the callsheet as musicians see it. It is a completely static public page — one of the only public pages of the whole app. It shows:

- A **header banner** with the project name
- **Program and Scores** — all musical pieces with composer, opus number, and year. Each piece has a button to download the score PDF. If no file has been uploaded yet, it shows "Aucun fichier" (No file)
- **Events** — all rehearsals and concerts with date, time, location, and type (rehearsal or concert)

- **Your custom content sections** — all the blocks you added in the editor, in the order you created them
 - **Contact Information** — the project managers with a note inviting participants to reach out for questions
 - A **last updated timestamp** at the very bottom
-

Tips

- Always fill in the version field before saving — the app will block you if it is missing
- Every content section must have a title — untitled sections also block saving
- Use "**New callsheet from the last one**" when making small updates to avoid rewriting everything
- You can notify all participants of an update via the **Mailing** tab → "**Send a callsheet notification**"
- If a piece shows "Aucun fichier", go to the **Files** page to upload the score for that piece

This view show the list of participants in a project. The top frame is where new registrations will be shown when pending validation. To fit all specific needs, it allows the user to choose which informations to show, from the basic contact informations to the responses to the

custom forms on the registration form. This way, unnecessary information can be hidden to keep the table readable. A button on the top right of this frame allows the user to manually add a participant to the project.

This is the main page of a project, and shows an overview of the key aspects of a project. Here is a breakdown of this page

- The navbar at the top allows to navigate easily between the different management tools (mailing, accounting, recruitment, auditions,...).
- Below that, it has a space where any important information (a new registration, a conflict in the recruitment page, a missing score to a piece,...) is highlighted, next to a few basic statistics.
- The project schedule is shown in a collapsed view that can be developed to see all the dates. Dates that are in the past have a grey background, to make it more visual during the project.
- Project managers are the people whose contact information will be on the callsheet, that musicians can contact with questions. They are show here as well.
- Sections frame: this widget show the current state of the orchestra versus the theoretical numbers. The bar graph indicates for every section how full it is, providing an easy way to see where the most work remains in the recruitment process. The sections can be ordered in orchestral order or by fill rate using the button in the bottom. The edit button on the right takes the user to the project editing page, see corresponding documentation page.
- Callsheet frame: this shows the versions of the callsheet, their dates of creation and update, and what proportion of the orchestra has seen it. In case musicians have not seen it, the option appears to send them a personnal notification.

- Registration form frame: As for the callsheet frame, it shows the date of creation and update of the registration form. This is the form candidates have to fill out to participate in the project.
- Pieces frame: This shows the pieces played in the project. The piece files tab is deprecated and will be empty because piece files have been replaced with material assignments.

This page allows the user to manage the mailings in the scope of a project. The app offers two automated mail types: recruitment emails and callsheet notifications. The former is an automated mail sent to all contacts subscribed to emails to notify them of an upcoming

36 / 46

project, containing the link to the registration form, and a link to a page used to recommend contacts. This feature is still in developement.

The second type of automatic one-push mail is the callsheet notification. This sends out an email to all participants of the project using the corresponding template (see the section about mailing), telling them the projects callsheet has been updated. This is to be used whenever an important information has been added to the callsheet (or has changed). The app also offers the possibility to send a custom email to everyone in the project, using a template or written on the spot. In that case, the user can either write HTML code or use the visual editor (wich also allows to insert pictures, files, maps integrations,...)

manually, by importing them from the database or from another project participant list. The names in the list have several important fields:

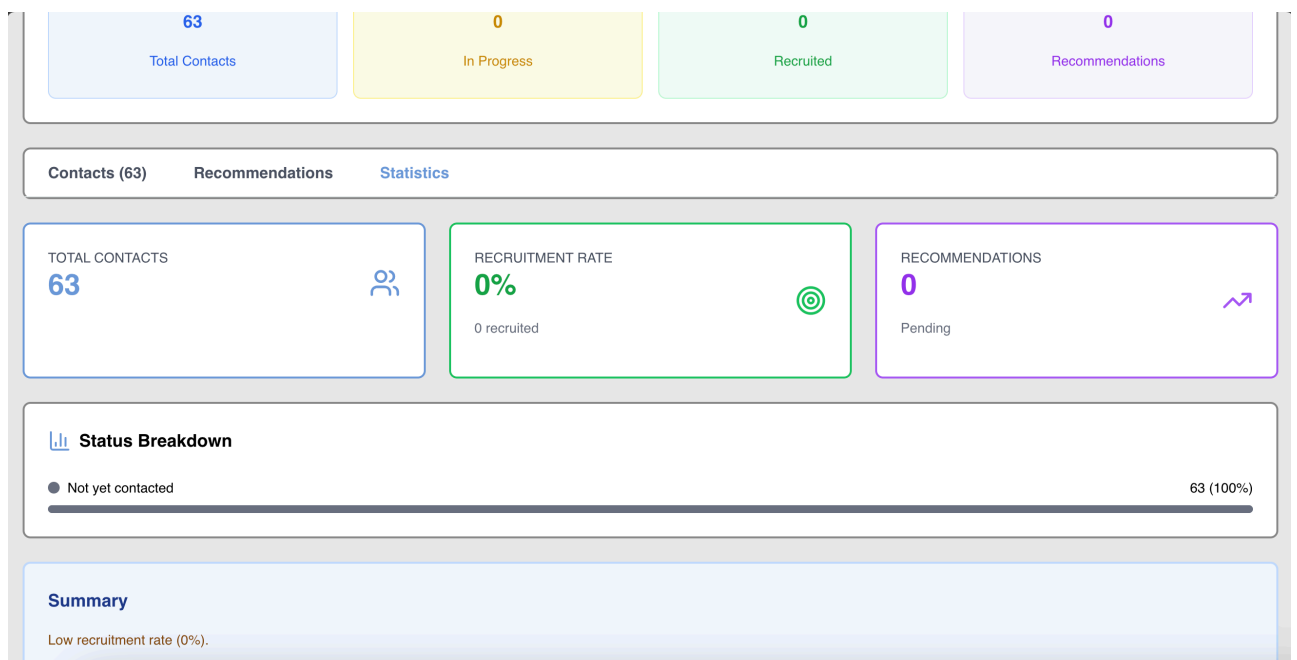

- Contact information: even when entering a name manually, at least one way of contact (email, phone or Messenger handle) is needed.
- Section (optional): the section in which the person would play. This is purely informative, and has no bearing on the section in which the player is registered when they do.
- Status: this is one of the two key features of the recruitment tool. A person can have several different statuses: not yet contacted, awaiting response, follow-up, not available, recruited, cancelled or pending validation. More custom statuses can be added using the "+ statuses" button. The tool has a feature to automatically pass all the people who have been on "awaiting response" for more than a set amount of days to "follow up".
- Contacted by: this is the second key feature, and lets all the active recruiters see who is "assigned" to contacting a specific person. It lets recruiters avoid contacting the same person twice. By default, whenever a name is added to the list, this field takes the name of the user that is logged in.
- Source: this gives the source of the person. It can be database import if the name has been imported from the database, manually added if the name has been added manually, database_auto_import if the person has been added automatically when registering (which happens if a person registers but was not in the list, to make sure that person is not contacted again), or recommendation, if the person is added from a recommendation (see below)
- Actions: this section contains buttons to call the person (if using the app on a smartphone), send an email, edit the status or any other field, or delete the person from the list. This page has a powerful filtering engine to allow users to only show names that satisfy one or more criteria (e.g. a recruiter wants to see only people assigned to him/her, and that have a status not yet contacted or follow up).

This page also has a recommendations tab:

Here are displayed all the people that have been recommended by someone through a recruitment mail (automated recruitment emails offer the possibility to recommend someone else). From this page, the user can see the recommended names (the recommendations tool also collects at least a way of contacting them), and can decide whether to follow up on the recommendation and send the person a recruitment email as well, or not. If they do, the person is added to the recruitment list.

The last tabs shows statistics about the recruitment process. They are purely informative, but allow to collect meaningful data on recruitment strategies over several projects, to see if one is more efficient than the other

This is the home page of the website, and features a list of all the projects, passed, present and future, organized by the orchestra. The buttons on top allow the user to filter project and show only the ones that are past, or the current projects (that have at least one concert or rehearsal date in the future). The button on top allows to create a new project and the limit per page can be changed, but other than that, this page is pretty straightforward.

Sections and instruments pages

Edited by Ramy The sections and instruments tool allows the user to organize the musical structure used throughout projects. Through this page, the user can manage instruments, create sections associated with those instruments, and organize sections into groups.

old_sections	21	
Strings 8-8-6-6-3	5	

SECTIONS

Add New

NAME	SIZE	INSTRUMENTS	ACTIONS
old_Cello	0	Cello	
old_Violin	0	Violin	

This page is divided into three main parts: Groups, Sections and Instruments. Each category has its own management table and allows the user to create, edit, duplicate or delete entries. These tools are used throughout the application to organize participants and projects according to instruments and sections.

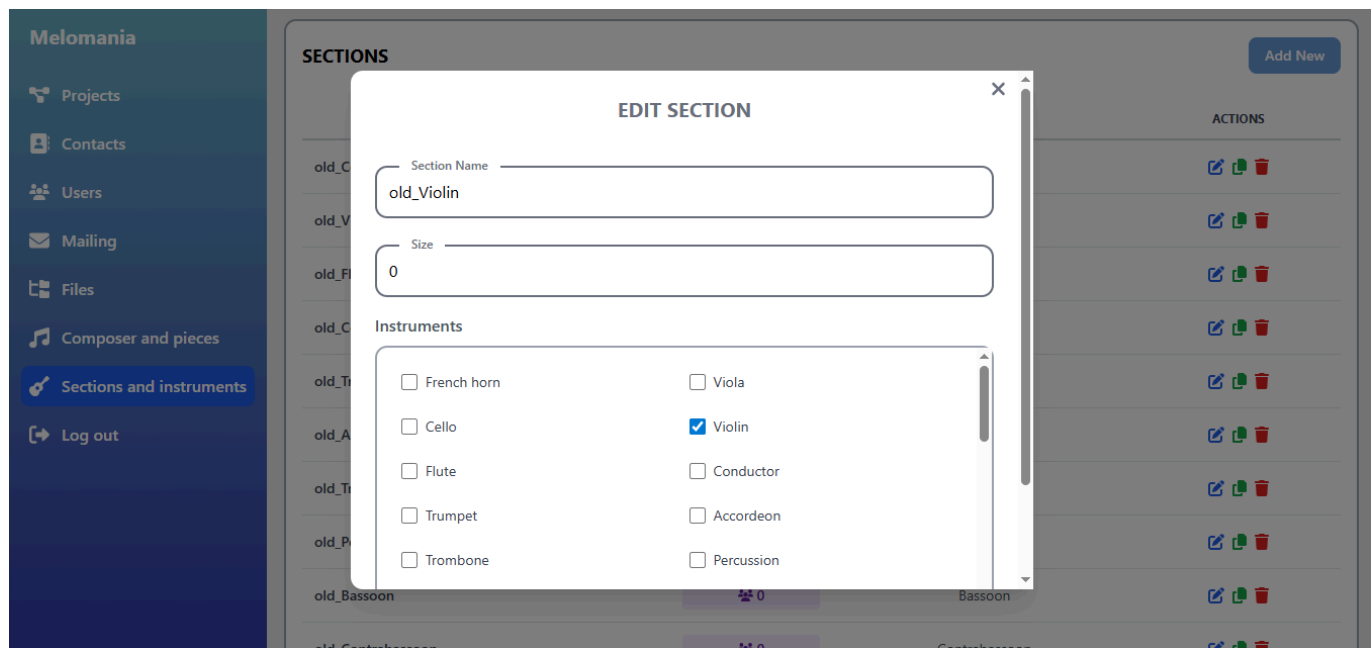

The user can set the group name and select one or more sections to associate with the group. Existing groups can also be duplicated in order to quickly create similar structures without having to recreate every section assignment manually.

Sections

Sections represent participant groups inside projects. A section is associated with one or more instruments and contains a size corresponding to the number of participants expected for that section.

The sections table displays the section name, its size, the associated instruments and action buttons allowing the user to edit, duplicate or delete a section.

When creating or editing a section, the following pop-up appears:

The user can set the section name, define the desired size and select one or more instruments associated with the section. These instruments are selected through a checklist directly inside the popup window.

Duplicating a section creates a copy containing the same size and assigned instruments, which can then be modified independently.

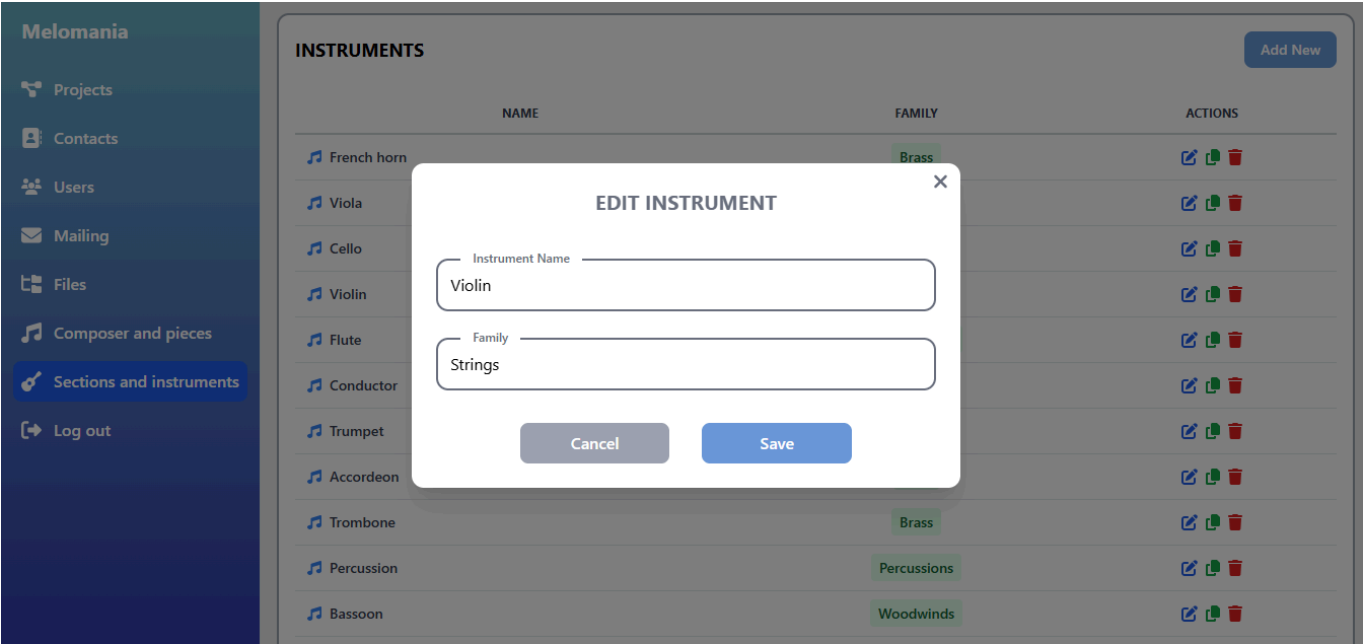

Instruments

INSTRUMENTS				Add New
	NAME	FAMILY	ACTIONS	
	French horn	Brass		
	Viola	Strings		
	Cello	Strings		
	Violin	Strings		
	Flute	Woodwinds		
	Conductor	Misc		
	Trumpet	Brass		
	Accordeon	Misc		
	Trombone	Brass		
	Percussion	Percussions		
	Bassoon	Woodwinds		

The instruments section allows the user to manage all instruments available throughout the application. Instruments are categorized by family and can later be assigned to sections.

The instruments table displays the instrument name, its family and action buttons allowing the user to edit, duplicate or delete an instrument.

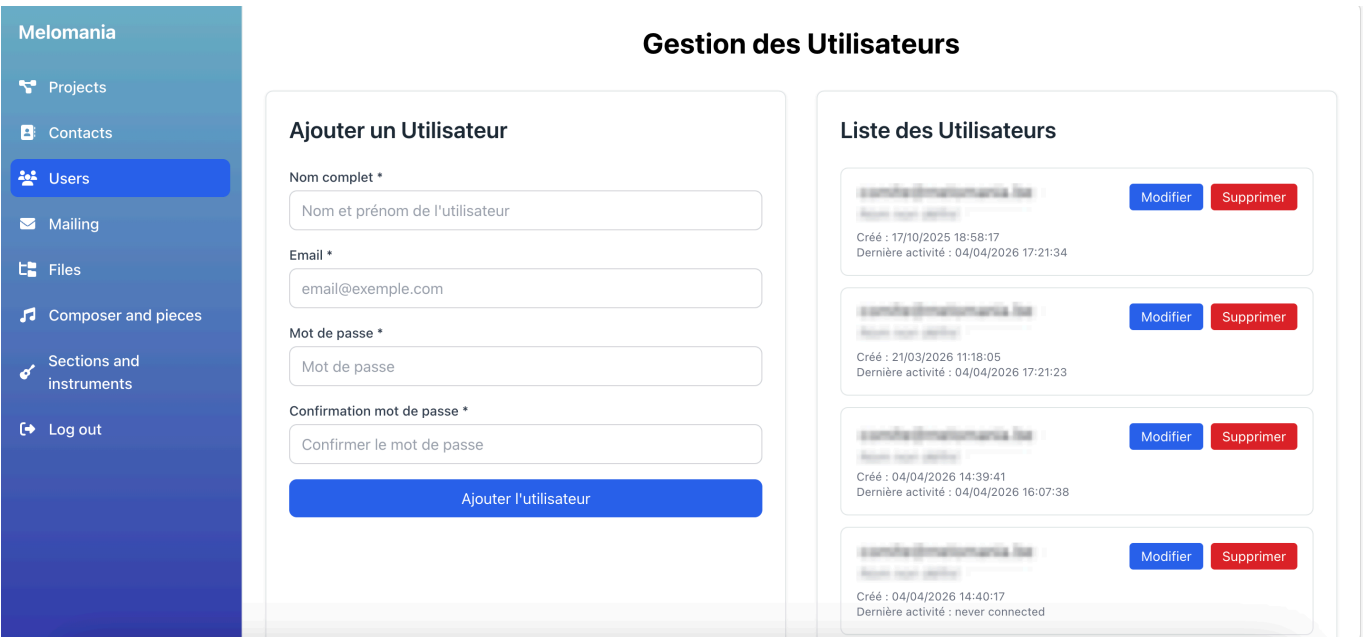

When creating or editing an instrument, the following pop-up appears:

The user can define the instrument name and its family. Instrument families are used to organize instruments more clearly throughout the application.

Duplicating an instrument creates a copy of the selected instrument and its associated family, which can then be edited independently.

Users management page

This page allows the user (provided they have the necessary privileges) to create, edit or delete other users. It show all existing users on the right and the form to create a new one on the left. It is in french but should be changed to english shortly.
