

Callsheet Feature - Test Log (Updated)

Feature: Callsheet (issue #99) Tester: Naomi Date: 21/05/2026

Server: <http://tool.sc1c1ro3903.universe.wf/> Login: admin@admin.admin / admin

Project used for testing: Let's dance! and Email Test

Legend: Pass Fail Bug Fixed Skipped

Known Bugs Identified and Fixed

All 8 bugs found during testing have been fixed and merged via pull requests. See the Summary of Bugs section at the bottom for full details.

1. Creating a Callsheet

#	Test Case	Expected Result	Actual Result	Status
1.1	Create with valid data	Callsheet saved and appears in the list	Callsheet saved and appears in the list	Pass
1.2	Missing version field	Validation error shown, callsheet not saved	Validation error shown, callsheet not saved	Pass
1.3	No title on content block	Validation error shown, callsheet not saved	Validation error shown, callsheet not saved	Pass
1.4	No content blocks at all	Validation error shown, callsheet not saved	Validation error shown, callsheet not saved	Pass
1.5	Multiple content blocks	All blocks saved and displayed correctly	All blocks saved and displayed correctly	Pass
1.6	Rich text formatting	Formatting preserved in preview	Formatting preserved in preview	Pass
1.7	Google Maps embed	Map displays correctly in preview	Map displays correctly in preview	Pass
1.8	Image in content block	Image displays correctly in preview	Image displays correctly in preview	Pass

2. Editing a Callsheet

#	Test Case	Expected Result	Actual Result	Status
2.1	Open existing callsheet	Form pre-filled with existing content	Form pre-filled with existing content	Pass

#	Test Case	Expected Result	Actual Result	Status
2.2	Edit version and save	Version updated correctly	Version updated correctly	Pass
2.3	Edit content block title	Title updated correctly	Title updated correctly	Pass
2.4	Edit content block text	Text updated correctly	Text updated correctly	Pass
2.5	Delete a content block	Block removed, others preserved	Block deleted correctly. Bug found: no confirmation dialog before deletion. Fixed in PR (CallsheetModifier.svelte)	Pass
2.6	Add new block to existing	New block added correctly	New block added correctly	Pass
2.7	Save without changes	Callsheet saved, updated_at refreshed	Callsheet saved, updated_at refreshed	Pass

3. New Callsheet from Last One

#	Test Case	Expected Result	Actual Result	Status
3.1	Click New from last one	Form pre-filled with most recently updated callsheet	Form pre-filled with most recently updated callsheet	Pass
3.2	Correct callsheet used as template	Most recently updated callsheet used	Most recently updated callsheet used	Pass
3.3	Modify and save	New callsheet created, original unchanged	Bug found: two callsheets were linked, editing one modified the other. Fixed in PR - changed callsheet.id = null to callsheet = {...callsheet, id: null} in [callsheetId]/creation/+page.svelte	Fixed

4. Public Callsheet Page

#	Test Case	Expected Result	Actual Result	Status
4.1	Open public link without login	Page loads without authentication	Page loads without authentication	Pass
4.2	Shows most recent version	v2 is displayed when opening v1 link	v2 is displayed	Pass
4.3	Program and Scores section	All pieces listed with composer and year	All pieces listed with composer and year	Pass
4.4	Events section	All events listed with date, time and location	All events listed with date, time and location	Pass

#	Test Case	Expected Result	Actual Result	Status
4.5	Custom content blocks	All blocks shown in correct order	All blocks shown in correct order	Pass
4.6	Contact Information section	Project managers listed with contact details	No manager details shown - project has no manager assigned. Expected behavior.	Pass
4.7	Valid visitorId	Participant marked as seen in seen table	Bug found: page stuck on Loading indefinitely. Fixed in PR - changed .where('project_id') to .where('id') in callsheets_controller.ts	Fixed
4.8	Invalid visitorId	Page loads, no error, seen tracking skipped	Bug found: page stuck on Loading indefinitely. Same root cause as 4.7. Fixed.	Fixed
4.9	No visitorId	Page loads correctly, no seen tracking	Opening /call_sheets/29/ without visitorId returns a 404 page. Route requires both parameters.	Pass
4.10	Last updated timestamp	Matches callsheet updatedAt value	Matches callsheet updatedAt value	Pass

5. Seen Tracking

#	Test Case	Expected Result	Actual Result	Status
5.1	Valid participant opens link	Seen count on dashboard increases	Could not complete during initial testing - public callsheet page was stuck on Loading. Bug fixed in PR. Retest required.	Fixed
5.2	Same participant opens twice	Count stays the same, not incremented twice	Could not complete during initial testing. Bug fixed in PR. Retest required.	Fixed
5.3	New callsheet resets seen count	0/n participants have seen the latest callsheet	Could not complete during initial testing. Bug fixed in PR. Retest required.	Fixed
5.4	Contact not in project	Page loads, no seen tracking, no error	Could not complete during initial testing. Bug fixed in PR. Retest required.	Fixed

6. Callsheet Notification Email

#	Test Case	Expected Result	Actual Result	Status
6.1	Send notification	Email sent to all participants	Confirmation dialog shown, mail successfully sent to all participants.	Pass
6.2	Email link (known bug)	Link uses callsheet.id not project.id	Bug fixed in PR - changed this.project.id to this.callsheet.id in callsheet_notification.ts. Verified	Fixed

#	Test Case	Expected Result	Actual Result	Status
			via Email Test project: link correctly used callsheet ID 27.	
6.3	Personalized name	Correct participant name shown	Verified via Gmail inbox (melomaniadevmail@gmail.com): email showed 'Hi Naomi Narh!' - correct.	Pass
6.4	Project name in email	Correct project name shown	Verified via Gmail inbox: email showed 'Email Test' - correct.	Pass
6.5	Manager contact details	Manager details listed correctly	Verified via Gmail inbox: Aurian Baudhuin's details (email, phone, messenger) listed correctly.	Pass

7. Score Downloads on Callsheet

#	Test Case	Expected Result	Actual Result	Status
7.1	Download score file	File downloads correctly	No score files attached to pieces in test project. Could not test.	Skipped
7.2	No score file	Aucun fichier message shown	Piece Czardas shows Aucun fichier disponible pour cette piece as expected.	Pass
7.3	Multiple score files	All files available for download	No score files attached to pieces in test project. Could not test.	Skipped

8. Deleting a Callsheet

#	Test Case	Expected Result	Actual Result	Status
8.1	Delete a callsheet	Callsheet removed from list	Callsheet deleted successfully. Confirmation dialog shown before deletion.	Pass
8.2	Content blocks cascade delete	No orphaned content blocks	Content blocks successfully deleted when callsheet is deleted. Verified via Adminer. 1 row existed before deletion, 0 rows after. CASCADE delete confirmed in the foreign key structure.	Pass
8.3	Seen records cascade delete	Seens records removed from database	CASCADE delete confirmed in the sees table schema — callsheet_id foreign key has ON	Pass

#	Test Case	Expected Result	Actual Result	Status
			DELETE CASCADE. Seems records will be automatically removed when a callsheet is deleted.	

9. Edge Cases

#	Test Case	Expected Result	Actual Result	Status
9.1	No callsheet exists for project	Graceful not found error	Bug found: page stuck on Loading indefinitely. Fixed in PR - changed .firstOrFail() to .first() with explicit 404 response in callsheets_controller.ts	Fixed
9.2	Very long version string	Saved correctly or validation error	Bug found: raw database error shown to user. Fixed in PR - added length validation (max 255 chars) in CallsheetModifier.svelte validateCallsheet function.	Fixed
9.3	Large number of content blocks	All saved and displayed	Bug found: creation form becomes unresponsive after adding one block. Fixed in PR - changed \$: contentIdCounter to let contentIdCounter in CallsheetModifier.svelte to prevent infinite reactive loop.	Fixed
9.4	HTML special characters	Script not executed	Script tag rendered as plain text on public page. No XSS vulnerability found.	Pass
9.5	Wrong callsheet ID in URL	Graceful 404 error	Bug found: page stuck on Loading. Fixed in PR alongside fix for 9.1.	Fixed
9.6	Concurrent edit	Last save wins, no data corruption	Last save wins as expected. No data corruption.	Pass

Summary of Bugs Found and Fixed

#	File	Description	Severity	Status
1	callsheet_notification.ts	Email link uses project.id instead of callsheet.id	High	Fixed - PR merged
2	callsheets_controller.ts	Public callsheet page stuck on Loading due to wrong query (.where('project_id') instead of .where('id'))	High	Fixed - PR merged
3	ProgramSection.svelte	Scores not available on callsheet - authenticated API calls failing on public page	High	Fixed - PR merged

#	File	Description	Severity	Status
4	[callsheetId]/creation/+page.svelte	New from last one links two callsheets together - mutation instead of copy	Medium	Fixed - PR merged
5	CallsheetModifier.svelte	No confirmation dialog before deleting a content block	Low	Fixed - PR merged
6	CallsheetModifier.svelte	Version field shows raw database error for 500+ characters	Medium	Fixed - PR merged
7	CallsheetModifier.svelte	Creation form becomes unresponsive after adding one content block (\$: reactive loop)	High	Fixed - PR merged
8	callsheets_controller.ts	Invalid callsheet URLs show Loading instead of 404	Medium	Fixed - PR merged

Notes and Observations

1. All 8 bugs found during testing have been fixed and merged into the dev branch via pull requests.
2. Email tests (6.3, 6.4, 6.5) were successfully retested using a Gmail test account (melomaniadevmail@gmail.com) and an Email Test project created specifically for this purpose.
3. Seen tracking tests (5.1 to 5.4) were blocked during initial testing due to the Loading bug. They need to be retested now that the fix is deployed.
4. Score download tests (7.1, 7.3) could not be tested as no score files were attached to pieces in the test project.
5. Database cascade delete tests (8.2, 8.3) could not be verified as there is no direct database access to the test server.

Automated Tests

Backend API tests (Japa): 6 tests covering authentication, CRUD operations and error handling. All passing.

Frontend E2E tests (Playwright): 3 tests covering authentication flow, unauthenticated redirect, and public callsheet access. All passing.

GitHub Actions CI: Configured to run all tests automatically on every pull request to dev.
